Practical task

Note:

1. Use Codeigniter Framework
2. Do not copy from search engine.
3. Max time 3 hrs
4. Add proper comment and variable name should be readable form.

1. Create two login module
   a. Admin
   b. User
2. Admin create dynamic employee registration form with which is required. On file upload control must be there.
3. This form filed should be store into database
4. When user login he/she fill out this form.
5. Apply jquery validation in this form and this form validation control by admin
6. Admin panel show this form data and export it in excel do not use data table export futures.

<u>THANK YOU || BEST OF LUCK</u>
